GOD'S LOVE, AND BEAUTY

"My Father in Heaven, help me never to forget Thy Love to me. It comes with the light of the mornings, and it remains with the light of the stars of the night. DEAR PATRON FRIENDS

Once again we greet you at the beginning of a great New Year, with our New and "Best Ever" Flower Book. Our hope is that it will prove a source of much happiness and joy for you.

So often, it seems, confusion presses in on our lives from all sides—but there is still "Peace in the garden." Our souls leap up as we feel HIS presence there in the garden beside us; and we realize that we are dealing with miracles when we plant a handful of seeds. We are dealing with life—and cheer—and PEACE. So, we would walk down your garden path with you this year and share this thrill of Gardening.

This year we have three great exclusives never before offered! Park's *Blue Lace* Petunia; our own exclusive Double Begonia, *Christmas Candle* (the first all double from seeds); and another terrific production, *Tinkerbell's Petticoat*, the finest and best double Morning Glory mixture. All three are exclusive with us and in keeping with Park's tradition of *All the Best of Old And New*.

We've expanded our book this year, bigger and better—the most complete we've seen. In these pages you'll find many fascinating new varieties; many old charmers (much improved of course) and many to challenge your gardening skill. All are top quality, viable seeds but some do demand all of your patience and gardening "know how" for success. However, do not hesitate to try the difficult items. We highly recommend our "Sure Fire" seed starting kit or our Special Horticultural Sphagnum moss to help you with your seed germination.

It is a special pleasure, this year, to hand you our Flower Book, revised, expanded and improved to make it more attractive and useful to you in the selection of your seeds and the care of your plants.

We wish for you, all success and pleasure in your gardening adventures.

Floricordially yours,

GEO. B. PARK, President

GINGER SNAPS

F₂ Hybrid Outdoor Snapdragons
Developed by Mr. Charles Weddle

One of the *greatest hybridists of our time, during ten years of intensive breeding work.

Ginger Snap was created with the needs of the home gardener as a specific aim. It is our firm belief that this is the finest Snapdragon ever offered for the home gardener. Thus Mr. Weddle has eminently accomplished his mission.

The plants build a heavy foundation before starting to bloom, thus they are a week or two later than Carrousel or Hit Parade. The revelation comes when bloom begins. The plants branch from the base, providing a multitude of heavy cane-like 2½ ft. stems to hold the heavy spikes of extra large florets. They need no staking. The colors are very bright and clear with a glowing sheen to glisten in the sun. The plants are of uniform height, so look well in the border. Ginger Snaps take adverse weather in stride and the heavy textured flowers keep well. Cut all you want, for if kept picked, the plants bloom and improve until the hard freezes of late fall.

Ginger Snaps in your garden will be the envy of the neighborhood.

Try some this year. They're in highest fashion.

108A—Ginger Lavender. Lovely rosy-lavender most ladies like.

109A—Ginger Pink. An exquisite shade of bright clear pink.

110A—Ginger Red. Deep glowing crimson-scarlet, very bright. The most attractive red in Snapdragons.

111A—Ginger White. Ivory white with creamy mouth.

112A—Ginger Yellow. Shining deep yellow.

113A—Ginger Snap Blend. A formula mixture of above F₂ Hybrid colors with other shades added.

PRICES: All Ginger Snaps above Pkt. 25c; 3 Pkts. 65c. One Pkt. each of all 5 colors \$1.00.

Extra Early, Colorful

121A—CARROUSEL. F₂ Hybrid Snapdragon. Like a merry-go-round on a color wheel! All colors present in Snapdragons are represented in this fine mixture. Plants are extra early, fast growing and uniform in height at about 28" with flowers evenly spaced on long stems. We recommend using Carrousel in conjunction with Ginger Snaps to lengthen the season of bloom. Pkt. 25c; 1/16 oz. \$1.00; 1/8 oz. \$1.75.

*Mr. Weddle is eminent for his work on F₁ Hybrid Petunias, some of his most recent creations being Comanche, Paleface, Firedance, Prima Donna to mention but a few. He was the first American to discover the secret of producing All Double Petunias.

F₁ Hybrid Petunias

Bring A New Era in Home Beautification

So dependable you can paint your garden scene with them, assured it will be just as you planned, remaining that way all season.

What are F₁ Hybrids?

F₁ Hybrids are produced by carefully hand crossing individual blooms from two selected inbred parents which in turn were especially developed for the superior qualities they impart to the cross.

These Superior Qualities are:

Greater Vigor. Faster, stronger growth, quicker bloom, larger flowers, brighter colors and heat resistance to carry through the summer in good condition.

Greater Production. More plant—More Flowers.

Greater Uniformity. Flower color and plant habit show almost no variation, so you can be sure of the result.

New Colors. Are offered here which were not possible except as F₁ Hybrids.

Most Modern. An F₁ Hybrid Petunia has won an All America Award almost every year since 1952. F₁ Hybrids represent a great advance in Floriculture, perhaps the most significant of our generation.

For more carefree gardening, easier, more luxurious living, plant Free Blooming F₁ Hybrid Petunias.

They may be started in fall or early winter indoors to make blooming window plants for late winter and very early spring. *Don't omit these beauties from your list.*

GIANT DOUBLE PETUNIAS Now in Complete Color Range — and Easy to Grow

Intensive work continues on the All Double Petunias, and each year they improve in size, plant habit and color range. The seeds are necessarily very expensive due to the fact that they have to be carefully hand pollinated and there is real art and scientific knowledge required to produce seed which will give consistently Double flowers. The seed are smaller and the seedlings weaker than the Single kinds, so require more care in starting. **EASY TO GROW.** Sow the seeds on Milled Sphagnum Moss in accordance with directions we provide with the moss. Moisture control is simplified, "Damping

Off" eliminated. Park's "Sure Fire" Starter Kit (See Pg. 11) makes growing Double Petunias easy and sure. The seeds are very small, and the 25c pkts., contain only a few seeds. The larger Pkt. is the better buy.

After the All Double Petunias get past the baby plant stage, they are quite vigorous and can "take it" even where summers are hot. Outstanding in beds, borders or as accent points.

PETUNIA CULTURE

This is covered more fully on page 11 of "The Gardener's Handbook" sent free with your order. We treat all seeds of Petunias with Semesan to help prevent "damping off" which together with covering too deeply causes more failures than anything else. The seed may be sown indoors about 8 weeks before your usual outdoor planting time to give you blooming plants in early June, and because the seed are small should be sown in boxes and transplanted even when planting late.

We are using and enthusiastically recommend Milled Sphagnum Moss for Petunia Seed Sowing.

Park's "Sure Fire" seed starter kit takes the "guess work" out of growing Petunias from seeds.

GIANT PANSIES

A PARK SPECIALTY

Pansies are well and favorably known, so that a description of their exquisite beauty, and usefulness in the garden is unnecessary. They are simply indispensable, and if we were to name a half dozen of our best seedling flowers, the Pansy would be one of them. There is, however, much difference in the strains, some being greatly superior in vigor and free-blooming quality to other plants as well as the great size, form, variety, and richness of colors and variations. We are pleased to say that the seeds we offer are from Pansy specialists, all of the new crop, and cannot be surpassed in quality, regardless of claim or price.

The Best SWEET PEAS

The Sweet Pea has all the good qualities of a perfect annual for general cultivation. It is easy of culture, growing in almost any soil and sunny situation, begins to bloom when small and, if freely cut, will continue for a long period. Flowers are rich and colorful, deliciously fragrant, and are freely borne on long stems. Excellent for cutting. CULTURAL DIRECTIONS pg. 10 "Gardener's Handbook."

How Good Can a Sweet Pea Get?

We feel that the fine varieties offered below are the best Sweet Peas growing today. They are the result of years of painstaking selection on the part of William Zvolanek, veteran California Sweet Pea breeder. These three types of multi-flowering Sweet Peas have terrific vigor which manifests itself in an abundance of extra long (18-20") pencil stems, each carrying 5-6 even up to 8 flowers instead of the usual 3 or 4; and in marked heat resistance.

Zvolanek's Early Multiflora.

Earliest to bloom, yet vigorous and heat resistant. Under proper culture yields the finest Sweet Peas it is possible to grow. 1969—Light rose, 1970—Orange Cerise, 1964A—Mid blue. 1964—White, 1963—Christmas red, 1963A—Giant pink. 1973—Early Multiflora Mixed. A complete, balanced blend of about 30 varieties in all Sweet Pea colors.

Zvolanek's Flori-bunda SPRING FLOWERING —Resists Heat.

Especially for outdoor planting, these bloom two weeks before the late type and are very strong in growth and heat resistance. Continue flowering a long time. 1990—Flori-bunda Mixed. Pink, lavender, purple, white, cream, rose, salmon, cerise, carmine, red, blue are all represented in this choice blend of colors.

Zvolanek's Plenti-flora (Late or Summer Flowering).

Growth is very strong and lush. Does well everywhere. 1967—Plenti-flora Mixture. We proudly present for the first time a complete full color range in this type.

Truly the Pot of Gold at Rainbow's End

The color, experts thought, could not be created.

We're Proud to Present: THE FIRST YELLOW SWEETPEA

Are Sweet Peas Hard to Grow in Your Climate?—Here's The Answer.

NEW HEAT RESISTANT SWEET PEAS

CUTHBERTSON'S STRAIN Flowers in Hot Weather

Not only do they continue blooming long after hot weather has come and other sweet peas have died, but they begin blooming two weeks ahead of the Standard Spencers. The flowers are of the true Spencer Orchid Flowering type with long stems and wavy petals. Large and deliciously fragrant, they are produced in great quantity on plants of exceptional vigor. The colors are bright and clear. If you grow only one strain of Sweet Peas this is the most practical.

SELECTING AND SOWING

If you wish seeds to sow in a garden bed or to present to children, or if you have had but little experience in raising flowers from seeds, select such flowers as Alyssum, Aster, Balsams, Cosmos, Calendula, Candytuft, Oriental Pinks, Gailardia, Helianthus, Marigold, Mignonette, Bedding Petunia, Pansy, Phlox, Ricinus, Scabiosa, Nasturtium, Valerian, Verbena and Zinnia; for vines get Coboea, Cypress, Dolichos, Gourds, Morning Glory, Thunbergia. Even in sowing these it is well to prepare the bed carefully in a sunny exposure; place a low board frame around it and after sowing, water and cover with a newspaper until plants appear. If you sow seeds in the open with full exposure to rain, wind and sun, you should not complain if few of the seeds become plants.

TO INSURE SUCCESS. Many failures with seeds are due to lack of knowledge of the time required by the seeds to germinate. Study the table on pages 45 and 46 to avoid failures from this cause. Follow instructions in the "Gardener's Handbook."

CHOICE FLOWER SEEDS—PART ONE

ANNUALS and PERENNIALS

Blooming the First Season

ANNUAL FLOWERS are those which grow, bloom, seed and die in one season. There are attractive annuals for every purpose. Some are fine for cutting, others for beds or borders, rock plants and climbers. We have listed in Part 1 the finest of all Annuals, and the perennials which may be treated as annuals in that they will bloom the first season from seed.

HARDY FLOWERS are those which may be sown in early spring as soon as the ground may be worked, or in fall to come up with the first breath of spring for earlier blooms. Hardy perennials and biennials may be planted in July or August and transplanted to permanent location about 1 month before frost where they live over with the protection of a mulch to give bloom in the spring. We think it best to sow perennials and biennials in the spring so that they can become better established before winter.

HALF HARDY FLOWERS listed with the symbol hh may be started early indoors for early bloom, or they may be planted outside when danger of frost is over. Half Hardy perennials need winter protection in the Northern states.

Hp. HARDY PERENNIALS are hardy plants which will live and bloom every year for a long period. Plants grow to the flowering stage each year and die down again to the roots which remain alive but dormant until the next season. They are very valuable for borders and cut flowers, and once established require less care than the annuals.

Hb—HARDY BIENNIALS are those which bloom the second year from seed, then die. For a continuous display of this type, seed must be sown every year.

PRIMROSE CULTURAL NOTES

Sow in pots or pans as early in the year as possible. water, cover with glass and place outdoors where the soil will be frozen. When milder weather sets in bring into gentle warmth and seeds will germinate freely. Freeze seeds in ice cubes for similar effect. Allow plenty of time—seeds are often tardy. Primulas need partial shade, rich, porous soil, and a mulch of pine needles or salt hay to keep roots cool—this seems the answer to growing them in warm climates. They like the east side of a hill, shelter from wind, good drainage.

TO CONTROL "DAMPING OFF"

"Damping Off" is a microscopic fungus growth which attacks the baby plants just as they emerge from the ground or while they are still small, and is the reason for many failures which are blamed on the seed, especially where very small seeds are concerned. It may be overcome by treating the seed (We do this for you as an extra "Park Service"), and sterilizing the soil. (Bake in the oven 2 hrs. at 200° 24 hrs. before planting.)

Sphagnum moss is a sterile antibiotic material in which fungi and bacteria cannot live. We have found sowing seed in Sphagnum sifted on sterile soil a positive Damp-off control.

Where sterilizing is impractical, as with an outdoor bed or cold frame, spray the soil, just as the seedlings appear, with Semesan solution (1/4 oz. to gallon of water). We offer SEMESAN in 1/4 lb. pkg. \$2.25. This is enough to spray 480 square feet. 1/2 oz. (for 40 sq. ft.) 45c.

Park's

GIANT DAHLIAS

Are easily grown from Park's strong tubers.

THE VARIETIES LISTED here are selected with painstaking care from the thousands of varieties in cultivation. Those listed on these pages are the best growers, freest bloomers, and those listed as mammoth will give the largest flowers Dahlias can produce. Growing show dahlias does take careful disbudding, and proper care.

KEEPING CUT DAHLIAS. Strip the foliage except at the top, recut the stem and immerse in water as hot as the hand will bear. When water cools transfer the Dahlias to cold water and place in the cellar overnight. Treated thus they will keep for several days and increase in size.

DAHLIA CULTURE. This subject including how to prevent disease and get rid of insect pests is covered fully in "The Gardener's Handbook." For bedding effects plant on or a week before frostproof date. For exhibition blooms plant late (May and June). Late planting brings the plants into bloom during late summer and fall when the cool temperatures promote better blooms.

EXHIBITION DAHLIAS. Exhibition Dahlias and satisfactory tubers cannot be produced in the same hill. If you want 12 inch flowers, go after them with fertilizer, water and disbudding.

INDEX, GERMINATION and CULTURE GUIDE

When sowing seeds it is always best to divide the packets and sow at different times. Note the time and give good care until the plants have had time to appear. The following table gives the time normally required for germination of each variety of seeds. This time may vary as much as 25% either way. Do not condemn seeds until you have given them at least two or three trials. Those marked z or having the dagger (†) beside them may lie dormant for a year or more. The other tables are self explanatory, and while they are somewhat complicated, do give a great deal of information about each of the hundreds of species listed.

Achimene Blue Beauty

ACHIMENE

Known as Widow's Tears or Nut Orchids, Achimenes bear generously the waxy, long keeping flowers. Decorative foliage enhances the clear jewel-like colors which are among the most pleasing in the Floral kingdom. You'll enjoy the "Magic Flower."

THREE Jewel-toned ACHIMENE Rarities
B3295—CAMILLE BROZZONI. An Emerald mound beneath exquisite little frs. of orchid with maroon spotted golden throat, white halo. 45c ea.

B3293—GORGEOUS. Robin's egg-blue with a large center blotch of golden canary, flecked maroon, white throat. The 2" flowers are waved, partly re-taxed and borne in profusion. The effect against the emerald leaves is ethereal—right out of "Fairyland" itself. Real color enchantment. 50c ea.

B3311—RARE DOUBLE. Deep purple trumpets, each with a ball of extra petals in the center for a most unusual effect. Dwarf, bushy, prolific plants cover themselves in bloom. 50c ea.; 3 for \$1.35.

One each of above 3 varieties for \$1.35

TUBEROUS BEGONIAS

All Large Bulbs. Not hardy.

THE BEST BEGONIAS IN THE WORLD

Grown especially for us by Mr. W. A. Brown a noted Begonia hybridizer from stock developed over a period of 10 years of constant breeding and selection. These bulbs will produce larger flowers (up to 10-12 in. when properly grown) more uniform, more fully double than the Belgian strain offered at right. Outstanding in this strain is the brilliance and life of every color—a glowing sheen which clothes them in shining beauty. If you want the best Begonias, in all the world, don't miss these. We offer:

ROSE FORM PICOTEE SHADES

Here is the most spectacular advance of recent years in Tuberous Begonias. The flowers are the same giant size as the Camellia Flowered type described above. Generally these flowers are either daintily edged or heavily bordered with a contrasting color, but they may also be strikingly mottled or spotted. Of all types, this group brings the highest proportion of uniformly fine form.

GLOXINIA CULTURE. For a succession of bloom start bulbs every two weeks from January thru April. Pot with crown protruding, using equal parts of rich fibrous loam, sand, and leaf mold. A warm temperature (70 degrees) is required or bulbs will rot. Insure good drainage by placing gravel in bottom of the pot. Water sparingly until growth starts, then plenty of water should be given and care taken not to wet the leaves. An eastern exposure, well sheltered from strong wind and sun suits them. After blooming, withhold water to ripen the tubers, then store in sand for winter at 45 degrees.

Begonia Multiflora (Best outdoor type)

BROWN'S BEST

HANGING BASKET BEGONIA

This strain has been greatly improved in recent years by interbreeding it with the Double Camellia type for size of flower and variety of color. It now combines medium-sized double flowers with good hanging habit. One of the most beautiful of all flowering plants, it is favored for the decoration of open verandas, sun porches, or greenhouses. It can be grown in any place sheltered from direct sun and strong wind.
